WHAT IS BEAN

DESCRIPTION

Spring beans are just object instances that are managed by the Spring IoC (Inversion of Control).

DESCRIPTION

Beans are created and wired by the framework and put into a "bag of objects" (the container) from where you can get them later.

DESCRIPTION

Beans are created and wired by the framework and put into a "bag of objects" (the container) from where you can get them later.

FEATURES

Control Bean Life Cycle

Can Initialize or Destroy bean
