Annotations

What is Annotation?

- Annotations are like markers, which give some addition information of the element to the complier.

Example

```java
public class bikeInsurance implements Insurance {

    @Override
    public String showStatus() {

        return "Your Bike is Insured";
    }

}
```

Why Annotation

- XML can be confusing
- Minimize usage of XML for configuration
- Convenient to use
